

PARTNER IN PROJECT

A platform that connects students across colleges to build projects together, showcase their tech stacks and GitHub work, and find teammates for hackathons.

Find Collaborators

Showcase GitHub

Build Hackathon Teams

Introduction

What Partner in Project is

Partner in Project is a web and mobile platform built for students who want to work on projects beyond their own classroom or campus.

It gives every student a profile that displays their tech stack and GitHub repositories, so others can quickly see what they can build and what they've already shipped.

Built for the college ecosystem — engineering, design, and research students across institutions, all in one shared network.

Tech Stack Profiles

Showcase languages, frameworks & tools

GitHub Integration

Link and display real project repos

Cross-College Network

Discover builders outside your campus

Motivation

Why we're building this

Great ideas stay local

Students have strong project ideas but rarely find the right people beyond their own friend circle to build them.

Skills are hard to discover

There's no easy way to see who already knows React, Flutter, or ML — and who has shipped real code on GitHub.

Hackathon teams form last-minute

Team hunting happens in scattered WhatsApp groups and Discord servers, often days before the deadline.

Collaboration tools aren't built for this

LinkedIn is too formal and generic tools weren't designed for student builders looking for teammates.

Problem Statement

Students across colleges have no single, purpose-built place to find collaborators by skill, showcase real project work, and quickly assemble hackathon teams before deadlines close in.

Fragmented discovery

No central place to find teammates by tech stack or interest across colleges.

No verified work signal

Profiles and resumes don't show real, linkable proof of what someone has built.

Time pressure at hackathons

Teams are formed in a rush, often mismatched on skills or commitment.

Solution

Partner in Project — one platform, three jobs

Skill & Tech-Stack Profiles

Every student builds a profile listing their languages, frameworks, and tools, so others can find the right skillset fast.

GitHub Repo Showcase

Link GitHub repos directly to a profile as verifiable proof of real, shipped project work.

Smart Matching & Connect

Search and filter students by college, skills, or interests, then connect and start a project conversation in-app.

Hackathon Team Finder

Post or join open hackathon team slots, matched by required skills, availability, and event.
